

Aquis Market Gateway

The simple, cost effective and quick way for Systematic Internalisers and Counterparties to connect.

Low Latency High Capacity

Average round trip latency of 11µs at 175,000 messages per second, sustained

Flexible

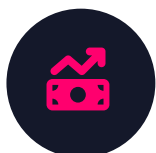

Configure the instruments you interact with, even on an intraday basis

Compliant

Bilateral interaction remains intact throughout as demanded by MiFID II

Key features

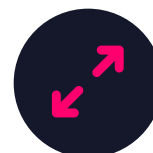

Cost effective

Both sides benefit from Aquis' unique subscription model structure

Simple

Counterparties can access numerous SIs via a normalised API

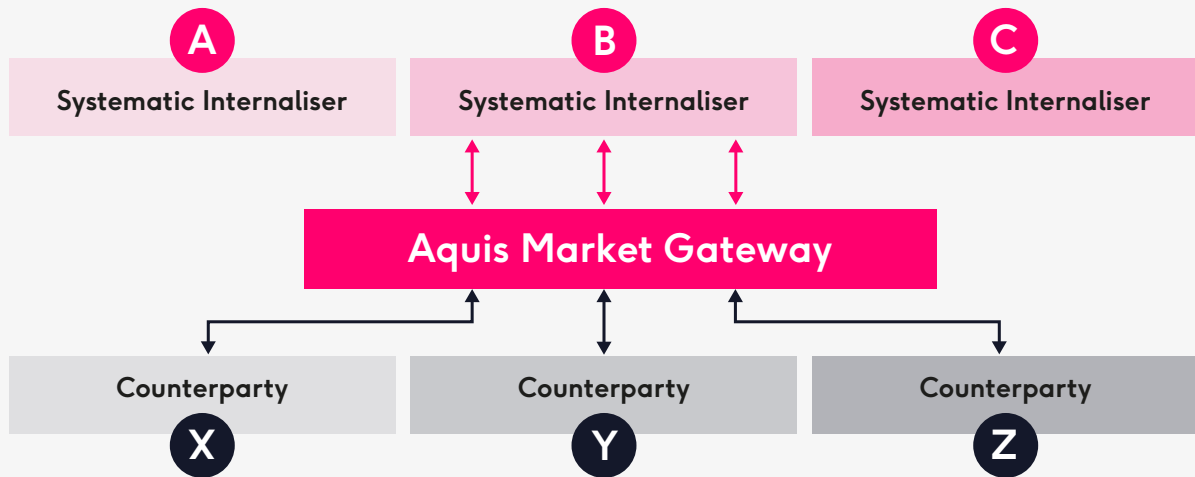

Scalable

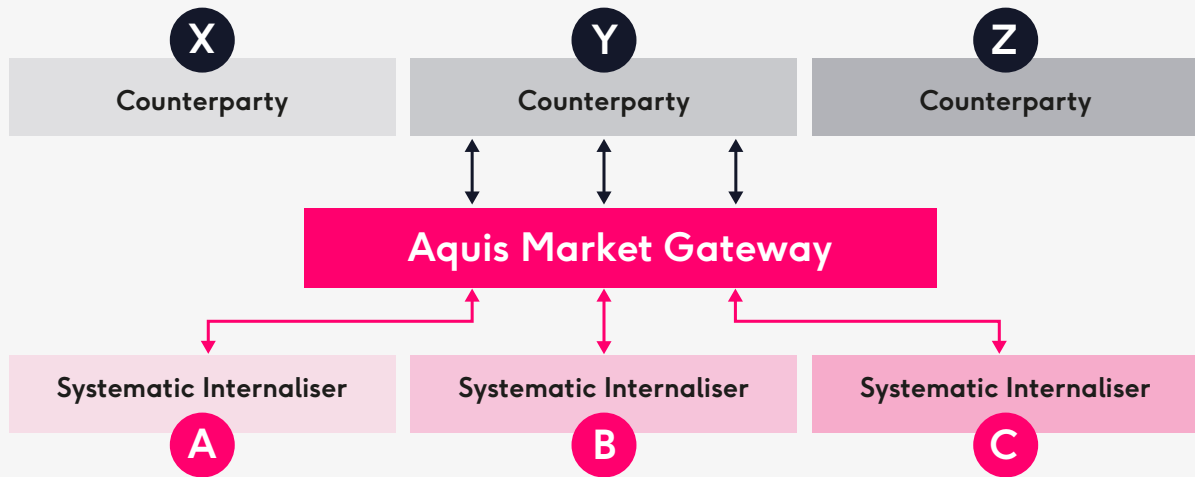

Allows SIs to reach a large number of Counterparties, vendors and vice versa without expensive dedicated connectivity to each other

How it works

How SIs will connect to Counterparties (bilaterally), via the AMG:

How Counterparties will connect to SIs (bilaterally), via the AMG:

- 1**

SIs distribute actionable messages - tradable quotes, amendments or cancellations – to Counterparties via the AMG
- 2**

A Counterparty wishing to trade responds to a quote via an Immediate or Cancel (IOC) or Fill or Kill (FOK) order
- 3**

If the order is successful, the Counterparty receives a trade confirmation message
- 4**

The relationship between SIs and Counterparties remains bilateral
